Module-3

Assignment

Question: What is RDBMS?

Answer: A relational database management system (RDBMS) is a program used to create, update, and manage relational databases.

Question: What is SQL?

Answer: Structured Query Language is a domain-specific language used to manage data, especially in a relational database management system. It is particularly useful in handling structured data, i.e., data incorporating relations among entities and variables

Question: Write SQL Commands

Answer:

- DDL – Data Definition Language
- DML – Data Manipulation Language
- DCL – Data Control Language
- DQL – Data Query Language

Question: What is join?

Answer: A join clause in the Structured Query Language (SQL) combines columns from one or more tables into a new table. The operation corresponds to a join operation in relational algebra.

Question: Write type of joins.

Answer:

- INNER JOIN: returns rows when there is a match in both tables.
- LEFT JOIN: returns all rows from the left table, even if there are no matches in the right table.
- RIGHT JOIN: returns all rows from the right table, even if there are no matches in the left table.
- FULL JOIN: returns rows when there is a match in one of the tables.

Question: Difference between RDBMS vs. DBMS

Answer:

- RDBMS stores data in tabular form.
- Multiple data elements can be accessed at the same time.
- Data is stored in the form of tables which are related to each other.
- Normalization is present.
- RDBMS supports distributed database.
- DBMS stores data as a file.
- Data elements need to access individually.
- No relationship between data.
- Normalization is not present.
- DBMS does not support distributed database.

Question: What is API Testing?

Answer: Application Programming Interface (API) is a software interface that allows two applications to interact with each other without any user intervention

Another definition, API (Application Programming Interface) is a computing interface which enables communication and data exchange between two separate software systems.

Question: Types of API Testing?

Answer:

- Open APIs: These types of APIs are publicly available to use like OAuth APIs from Google. It has also not given any restriction to use them. So, they are also known as Public APIs.
- Partner APIs: Specific rights or licenses to access this type of API because they are not available to the public.
- Internal APIs: Internal or private. These APIs are developed by companies to use in their internal systems. It helps you to enhance the productivity of your teams.

Question: What is Responsive Testing?

Answer: Responsive testing involves how a website or web application looks and behaves on different devices, screen sizes, and resolutions. The goal of responsive testing is to ensure that the website or web application can be used effectively on various devices, including desktops, laptops, tablets, and smartphones.

Question: Which types of tools are available for Responsive Testing?

Answer:

- LT Browser
- Lambda Testing
- Google Resizer
- I am responsive
- Pixel tuner

Question: What is the full form of .ipa, .apk?

Answer: A file IPA document is used to test iOS applications even before it is a fully functional app, whereas an APK (Android Application Package) software is installed on Android devices. App developers can easily create IPA software and push it to the app store. An IPA document is similar to a simple ZIP folder

Question How to create step for to open the developer option mode ON?
Answer:

Step 1: Go to *Settings* > *about phone*.

Step 2: Scroll down to *Build number*.

Step 3: Tap Build number seven times. After the first few taps, you should see the steps counting down until you unlock the developer options. You may also have to tap in your PIN for verification.

Step 4: Once developer options are activated, you will see a message that reads, you are now a developer.

Step 5: Go back to the Settings pane and head to System, where you will now find Developer options as an entry.

Step 6: Tap it and toggle the switch on if it is not already, and from there, you can proceed to make adjustments to your phone.
